Materials in connection with the Hasan Water Supply Scheme

Kind attention is invited to this office letter No L 1312 dated 4/8/1937, addressed to the D C Hasan Dt. The estimate amounting to Rs 1,36,410/- forwarded by the Dy of Works for the Water Supply Scheme to Hasan town has been sent to the D C Hasan Dt, with a view to find out the opinion of the Hasan town Mc Cl in the matter & also to suggest the ways and means of financing the scheme. He has also been requested to state whether the scheme under ref cannot be confined to Hasan town and its extensions, leaving the question of supplying water to the three adjoining Villages for the present.

It would perhaps take some time more before a reply from the D C could be received, and if the Hasan town Mc Cl are prepared to drop out from the water supply scheme the three villages as has been suggested in this office letter dated 4/8/37, the estimate would get considerably reduced and perhaps there would also be a proportionate reduction in the figure now prepared viz Rs 56,000/- for the distribution System of the scheme.

Pr C File No 117 of 1937 — 38 — General and Revenue Secretariat

Serial No

From

The Deputy Commr Hassan dstt

no 2165 C 2937/37-38 dt 19 8

forwards the works of the Hassan

Town Municipal agreeing to the revised

estimate amtg to Rs 1,36,410 for the

water supply to the place and puts up

the ways & means of financing the scheme —

13) Original Estimate was for Rs 5,26,257/- to be

financed by the Govt & the Govt in equal

proportions

Revised Estimate — Rs 1,36,410

(I) Mcply will meet half of Rs 68,205/

to be advanced as a loan to them by

the Govt at 4 p.c. interest & repayable

25 annual instalments & in addn

to allow the Mcply to float a loan (debenture)

for that extent

(II) Govt to contribute the other half of Rs 68,205/

14) The Mcpl proposes to levy water tax

and anticipate increased income from

the revision of assessment on houses &

The total increase income anticipated at

Rs 13,000 D-C states that

this amt would be enough to meet the

annual charges of the loan & interest and

the recurring maintenance charges & towards the shortfall

1) the Mcpl can come out in

favour, excluding the three villages

for Rs 20 etc, as it would not cost

Hassan water supply scheme

952

Serial No

more than Rs 9000/- The D.C. suggests that as the income may not be more Rs 50 or 60/- per annum, the question of extending the scheme may be deferred for the present. The Budget Estimates for 37-38 are placed

(6) The Govt may be pleased to sanction a loan to the Municipality in the alternative of allowing the Municipality to raise a debenture loan and also whether a contribution of Rs 6 or 7000/- could be paid by Govt this year for 1937-38.

Levy (J.S.)

(8) In G O No L 8476-8/M1 81-36-83 dated 25/27th May 1937, an estimate for Rs 52,625 was sanctioned for the Hassan Water Supply Scheme, subject to the following conditions -

(1) Government will meet one half of the estimated cost, viz , Rs 26,312, the other half being met by the Municipal Council

(2) A loan of Rs 25,000 will be sanctioned to the

FILE U O No FI 588 24 AUG 37 BANGALORE

NOTE—Contn Sheet

WD 0264—GPB—30,000—13 8 37

Hassan water supply Scheme

File No of 193 | General and Revenue Secretariat

Municipality repayable in 15 annual instalments with interest at 4½% to meet its share of the cost

(3) The payment of the annuity towards the loan (Rs 2,328) will be the first charge on the toll revenue realised in the Municipality

(4) Necessary provision will be made in the annual budgets of the Municipality for repayment of the annual instalments of the loan and for meeting the maintenance charges of the water works (Rs 5,000)

The present proposal is to sanction a modified estimate for Rs 1,36,410 on the following terms

(1) Half the cost may be borne by Government the other half being borne by the Municipality

(2) The Municipality may be granted a loan for Rs 68205 at 4% interest repayable in 25 years

or in the alternative

The Municipality may be permitted to float a debenture loan of Rs 68,205 at 4% interest repayable in 25 years with the guarantee of Government

19) In the modified estimate now sent up for sanction provision for Establishment and Tools and Plant charges has been calculated at 12½% for the labour portion of the work (Rs 30,000) According to G O No L 2144-62/M1 63-35-2 dated 18th September 1935, 12½% has to be charged on the total outlay on works and repairs, and not merely on the labour portion of the work If provision is made in accordance with this standing order, the amount of the estimate will be Rs 1,49,249 against Rs 1,36,410 sanctioned by the Director

20) The amount provided in the current year's budget under "Grants for water supply in Towns" is Rs 1,00,000 Whether it would be possible to find the large sum of about Rs 75,000 required for the Hassan scheme out of the current year's grant ~~may be ascertained~~ after earmarking

Hassan Water Supply Scheme

Serial No

the funds required for sanctioned schemes in progress, may be ascertained

As regards the loan to the Municipality, the period of 15 years is itself sufficiently long, and it is not desirable to extend it further The prescribed rate of interest on loans to Local Bodies is 4½%, and it is not possible or desirable to reduce it further For a loan of Rs 75,000 repayable in 15 years at 4½% interest, the annuity (towards principal and interest) will be Rs 6,983 Information as to the probable maintenance expenditure on account of the modified scheme is necessary and may be ascertained This will be much more than Rs 5,000 (estimated cost according to the original scheme) and the cost of collection of the water-tax etc , has also to be taken into account The grant of the loan will be justifiable only if the Municipality is found able to meet the above items of expenditure, after meeting the existing commitments on account of the Electric Lighting and Drainage schemes Reference is invited to Mr S Shamanna's notes (Paras 19 and 42 of the notes) regarding the financial position of the Municipality in Ml file 81-36-83 sanctioning the Hassan water supply scheme for Rs 52,265 There has been no appreciable improvement in the financial position of the Municipality From the Budget Estimate of the Municipality it is seen that there has been very little margin between normal revenue and normal expendi

NOTE — Contn Sheet

WD W 1—GPB—30 000—18-7 35

Harsan Water Supply Scheme

File No of 193 | General and Revenue Secretariat

expenditure and the closing balance falls short of the prescribed minimum balance The Municipality expects an increase of about Rs 13,000 in its income from the following sources:-

(1) Increase in site tax	Rs	837
(2) Water tax at 25% of the total demand under direct taxes	"	2,400
(3) Income from 500 house connections at Rs 1-8-0 each per month	"	9,000
(4) Probable increase on account of revision of assessed taxes	"	1,000
Total	Rs	13,237

22) The realisation of an income of Rs 9,000 on account of House connections is problematical Some free allowance would be allowed in all cases, and it may not therefore be possible to realise a revenue of Rs 1-8-0 per house connection per month The present financial condition of the Municipality does not therefore justify the sanction of the modified scheme

The question of free allowance does not arise as 1-8-0 a month will be fixed on all house connections
GV
Rm
28-8-37

23) It is not desirable to permit small Local Bodies to raise public loans and in any case, Government cannot guarantee the repayment of the loan, in the present financial condition of the Municipality

24) The present scheme is too costly in the circumstances of the Municipality
GW
27/8/37

4

Serial No

25) The reasons for the deviations in the revised estimates as compared to the original sanctioned estimates are given by the Sanitary Engineer in para* 2 of the report accompanying the estimate According to the old scheme there would be two sources of water supply- one from the existing bore-well and the other a new well to be sunk near Hunsanakere The Sanitary Engineer explained to me in person that the maintenance charges of the two together would come to Rs 8,000 The new scheme is for supplying from one source viz , from a well sunk in the bed of the Halavagal Feederhalla, & the cost of maintenance worked be Rs 6800/-

FLAG

26) From the comparative statement accompanying the revised estimates it will be seen that the principal increases are under the following items -

	Old Estimate	New Estimate	Difference
Pressure Filters			
Two pressure filters	7,000	3 pressure filters 17,000	+ 10,000
Rising Main			
Rs 3000 for 1,500 feet of 5 inch pipe		Rs 20,415 for5400 feet of 6 inch pipe	17,415
Distribution system			
Rs 16,000 for 40 public taps and few house connections		Rs 56,500 for 100 public taps and 700 house connections	40,500
Extra item			
Chlorination of water	~~2000~~		2000

The other items, though minor contribute to the tota heavy increases in the revised estimate

NOTE.—Contn Sheet

WD 6 91—GPB—30 000—18-7-85

2) Though the revised estimate is for Rs 1,36,410 the Financial Secretary has pointed out that E T P charges at 12½% will have to be calculated not only on the labour portion of the work viz , Rs 30,000 but on the entire estimate If this is done the amount of the estimate will go up to Rs 1,49,245 as against the sanctioned estimate for Rs 52,625, the difference being Rs 96,620

According to the proposal of the Sanitary Engineer, Government will have to pay an additional Rs 48,310 as grant and the Municipal Council will have to raise an additional loan of an equal amount

3) The Municipal Council was consulted in the matter, on the basis of the revised estimate for Rs 1,36,410 they accept the estimate and pray that Government may be pleased to sanction a loan at 4% interest repayable in 25 annual instalments to meet their portion of the cost In the alternative they solicit sanction to float a loan on the same terms The Financial Secretary is definitely of opinion that no Government guarantee can be given if the Council float a loan in the present financial condition of the Municipality

4) For the repayment of this loan and for meeting the annual maintenance charges the Municipal Council have pointed out the following sources

(1) Increase in house tax	Rs	837
(2) Water tax at 25% of the total demand	"	2,400
(3) Income from 500 house connection at Rs 1-8-0 per mensem	"	9,000
4) Probable increase on account of revision of taxes	"	1,000
Total	"	13,237

Serial No

30) For repayment spread over a period of 25 years with interest at 4%, annuity as calculated by the Municipal Council would be Rs 4,315, but for repayment ~~for~~ in 15 years at 4½% as calculated by the Financial Secretary the annuity would be Rs 6,983 or Rs 7,000 nearly Mr Krishna Iyengar, Sanitary Engineer, tells me that the maintenance cost of the revised scheme would be Rs 6,800 as against the maintenance ~~and~~ cost of 8,000 for the two different sources of supply according to the original scheme The present maintenance cost of the bore-well system is Rs 5,000 The total sum that the Municipal Council will have to find therefore ~~an~~annually according to the new scheme, even accepting the annuity as calculated by the Financial Secretary would be Rs 6,800 plus -- Rs 7,000- total 13,800 From this must be deducted Rs 5,000 the present cost of maintenance The additional cost ~~of~~ to the Municipal~~ity~~ Council will therefore be Rs 8,800 This since the Financial Secretary however is sceptical about the Municipal Council realising Rs 9,000 from house connections as anticipated

Spl to add from the sources pointed out

31) In case Government decide to sanction the scheme an additional grant will have to be asked for as the present allotment of 1,00,000 for improving water supply in towns will not be adequate The terms on which the loan asked for by the Municipal Council may be granted is also --

(II member)

31 8 37

1787-

5) The revised scheme is estimated to cost Rs 150000 in round figures, ie nearly three times as much as the original scheme It is understood that it has already been put in hand As in the case of the original scheme, the cost of this are also has to be met by Govt and by the Municipal council in equal shares, the latter has given a loan of Rs 75000 on the terms laid down in G O of May 27, 1937 It is doubtful whether the Municipal Council can thus pay the instalment of the loan and meet the enhanced maintenance charges from the new sources of revenue pointed out in its Resolution If this is not found possible, it will have to make other adjustments in its expenditure The council may be asked to take early steps for imposing a water tax and house connection fees, as proposed in the Resolution As for the Govt share of the cost

interest)	Rs 6 983
Maintenance charges (extra)	Rs 1 800
Total	Rs 8 783

Government

Loan	Rs 75 000
Government grant	Rs 75 000
Total	Rs 1 50 000

37 As stated by the Finance department in its note dated 27th August 1937 the financial position of the Municipality does not justify the sanction of the costlier scheme particularly taking into account the commitments of the Municipality ~~to pay the loan instalments~~ in respect of the Electric Lighting and Drainage Schemes The capacity of the Municipality to pay the loan instalments and the maintenance charges from the new sources of revenue pointed out by the Municipality is also doubtful (vide para 32) There is a tendency on the part of Local Bodies to take up heavy financial burdens in a light-hearted [redacted] manner without reference to their ability to bear the same and to embark on costly schemes beyond their capacity This tendency is to be discouraged in the interests of both Government and the Local Bodies When the scheme costing Rs 52 625 was considered suitable three months ago it is not clear why a costlier scheme should be

Serial No

forced on the Municipality now The sanitary engineering department seems to be preparing schemes without reference to the financial capacity of the Municipalities concerned One of the chief considerations which this department is to keep in view in preparing projects should be the financial capacity of the concerned Local Body to bear the burden There is no use in preparing too costly schemes beyond the financial capacity of the local body concerned

38 The availability of the provision under 'Loans to Local Bodies' for the costlier scheme has to be ascertained In view of the heavy capital commitments in the Electrical and Railway departments and the need for the discharge of the 5½% Loan for Rs 210 lakhs during 1938 it is desirable to conserve our cash resources and prevent outgoings from the Treasury as far as possible This loan has not been provided for in the Budget The limited funds provided in the Budget for any Local Bodies should be utilised for the benefit of as large a number of Local Bodies as possible instead of benefitting only a few Local Bodies It is therefore not possible or advisable to give this loan

39 As regards the Government grant it is to be stated that an extra grant of Rs 75 000 is necessary for the purpose An extra grant in the middle of the

NOTE—Contn. Sheet.

16

File No of 193 | General and Revenue Secretariat

year is justifiable only in the following cases

(1) where the work to be taken up is emergent and not deferrable till next year

(2) where the Revenue account allows scope for sanctioning an extra grant

40) As regards (1) it is to be stated that the present work cannot be regarded as not deferrable till next year As regards scope for additional grant reference is invited to the note of the Finance Department submitted recently to the Dewan and Members of Council from which it will be seen that extra grants to the extent of about Rs 2 lakhs have already been sanctioned without reference to the budget position and with these additional grants the revenue transactions of the current year are likely to result in a deficit of about Rs 1½ lakhs against a surplus of Rs 59,000 taken in the Budget There is therefore no scope for further additional grants and on the other hand there is need for effecting savings in the existing grants to the extent possible A liberal provision of Rs 1 lakh has been made in the current year s budget under "Grant for water supply in towns" against Rs 55 000 provided last year, and further increase in the grant is, neither desirable, nor possible and is not financially correct

would therefore respectfully beg to represent

Revised Estimate for the Hattemwatte Supply Scheme

Final Note by the Second Member of Council

Subject —

Estimate amounting to Rs 1,26,210 for water supply to Hassan town

(B) A scheme of water supply to Hassan town estimated at Rs 52,625 was sanctioned by Government in May last, the cost being met by Government and the Hassan town Municipality in equal proportions According to this scheme, it was proposed to utilise the existing borewell system for water supply to the extensions and feed the rest of the town by sinking a well near Hunsanakere from which water would be supplied to ~~the~~ 40 public taps and to about 500 house connections

But before the work was put in hand, the public and the Municipal Council of Hassan town represented to the Dewan during his tour in the Hassan District, that the maintenance charges of both the borewell system and the new scheme would be rather heavy and requested for a more comprehensive scheme of water supply, abandoning the borewell system, so as to provide for about 700 house connections and about 100 public taps

(Z) The Director of Health accordingly sent up a revised scheme for supplying water from one source, viz , from a well sunk in the bed of the Halagaval feeder halla estimated at Rs 1,36,410, calculating the establishment, tool and plant charges at 12½ per cent on the labour portion of the work only The Hassan town Municipal Council approved of the estimate at their special meeting held on 12th August 1937 and requested Government to sanction half the cost of the scheme as a grant-in-aid and to advance the other half as a loan at 4 per cent interest repayable in 25 annual instalments

In order to keep down the capital expenditure at a minimum, the estimate has been further reduced to Rs 1,26,21(

(calculating the establishment, tool and plant charges on the entire estimate) by omitting, for the present the distributaries to the three villages, which are within a radius of 1½ miles from the town and by limiting the scheme to the items tha are absolutely necessary

It is proposed to sanction the modified scheme, the Government and the Municipality sharing the cost in equal proportions In order to enable the Municipality to meet its shar of the cost Government will grant a loan of Rs 63,105 with interest at 4½ per cent repayable in 15 annual equated instalment The Municipal Council expect to meet the annuity and the annual maintenance charges of the water supply scheme by levying water tax, house connection fees, etc

A demand for an additional grant of Rs 63,105 under "30 grants for public improvements" will be placed before the ensuing Session of the Legislative Council to meet the Government share of the cost

The Dewan and the First Member of Council agree to the above proposal and His Highness' gracious sanction is solicited thereto

MEMBER OF COUNCIL

Bangalore,

SIR

Revised estimate for Rs 1,36,410/- for the water supply of Hassan Town

I have the honour to forward herewith a revised estimate for Rs 1,36,410/- for water supply scheme of Hassan town, along with the detailed estimates for the several items of works mentioned in the estimate, for favour of obtaining Government sanction for the same

According to the original scheme an estimate for Rs 52,625/- was sanctioned by Government in their Order No L 8476-8/M1 81-36-83 dated 25/27th May 1937

In the original scheme it was proposed to utilise the existing bore well for water supply to the extension and to feed the rest of the town from a well sunk near Hunsankere, providing about 40 public taps and giving facilities for a few house connections Considering the heavy maintenance charges of both the borewell system and the new scheme, the Municipal Council and the public of Hassan town, represented to the Dewan during his recent tour in Hassan District for a more comprehensive scheme of water supply abandoning the borewell system and giving facilities for about 700 house connections and 100 public fountains In the

revised estimate it is proposed to utilise 1000' Rft of 3 C I pipe available in the Municipal stores

There is a net excess of Rs 83,785/- in this revised estimate of Rs 1,36,410/- over the sanctioned estimate of Rs 52,625/- The reasons for the excess in this revised estimate are, the distribution main and sub mains have to be laid in a large area of about 5 Sq miles to feed about 150 public taps and 700 house connections, distributed all over the town, and also to supply the 3 villages namely Rajagatte, Adavalli and Eadegerapalya, which are each about 1½ miles from the town The town is scattered over a wide area on account of which the lengths of the distribution mains and submains are great, thus causing the increase in the estimate as per the current increased prices of materials

Even if the number of public and house connections are reduced to 50 per cent of what is provided in the estimate, the estimate will not be very much reduced as the mains and submains have to be laid of sufficient size so that there may be scope for increasing house connections and public fountains as demand arises

I request you to be so good as to obtain and convey early sanction of Government for the revised estimate, half of the cost being met by Government and the other half by the Municipal Council

I have the honour to be,

Sir,

Your most obedient servant,

c/m Ramaiah

From

Abdul Aziz Khan, Esq , B A ,
Deputy Commissioner, Hassan District

To

P H Krishna Rao, Esq , M A ,
Secretary to Government, L S G Department,
B a n g a l o r e

Sir,

With reference to your letter No L. 1372/M1 dated 4th August 37, forwarding a revised estimate for ₹ 1,36,410/- for the Water Supply Scheme to Hassan Town, and calling for the resolution of the Hassan Town Municipal Council agreeing to the revised estimate and their suggestions re ways and means for working out the Scheme, I have the honor to forward herewith in original, letter No H C 19-37 dated 12th August 1937, with all its enclosures, received from the President, Hassan Town M1 Council on the subject and to state as follows -

2 The Municipal Council have resolved at their Special Meeting held on 12th August 1937, that they are agreeable to the revised estimate As regards the cost, they have resolved that half the total cost might be kindly sanctioned by Government, as grant-in-aid and that the remaining half be advanced to them as a loan, repayable in 25 annual instalments at 4% interest In the alternative, they solicit sanction to float a debenture loan of ₹ 68,205/- at 4% interest, repayable in 25 years They have also resolved that the scheme be extended to the 3 villages referred to in para 2 of your letter under reply, as the initial cost that they have to incur is about ₹ 9000/- (as ascertained at a personal talk with the Sanitary Engineer) which does not materially reduce the cost, and as the dropping of this question would create

discontent among the rate payers of the localities

3 The Municipal Council expect to increase their present income by about ₹ 13,000/- as detailed in the margin[x] The annuity on the loan of ₹ 68,205/- referred to above is reported to be ₹ 4315/- The Municipal Council expect to meet the annuity and the annual maintenance charges out of the anticipated increased income The average annual maintenance charges of the existing Water Supply Scheme amount to ₹ 5,000/- The annual maintenance charges in respect of the original estimate for the water supply scheme for ₹52625/- are also calculated to come to ₹ 5000/- But the Sanitary Engineer has not intimated whether the maintenance charges in respect of the revised estimate for - ₹ 1,36,410/- would not go beyond ₹ 5000/- I have this day requested him to furnish this information Even if the maintenance charges are slightly in excess of ₹ 5000/-, it is possible to meet the sare out of the anticipated increased income referred to above

[x]

(1) Increase in site tax as per G O No L 1542-3/M1 73-37-8 dated 10-8-37	837/-
(2) Water tax at 25% of the total demand of ₹ 10,716/- under direct taxes	2400/-
(3) Income from 500 house connections @ R1-8-0 each per month	9000/-
(4) Probable increase on account of revision of assessed taxes	1000/-
Total	13237/-
or in round figures	13000/-

4 At present, there are a few drinking water wells in the 3 villages referred to in your letter It is understood that the probable income from water-tax in these villages would not be more than R50/- or R60/- per annum This is out of all proportion to the capital, outlay to be incurred for extending the water supply scheme to these villages As such, I am of opinion that the question of extending the schemes to these villages may be deferred for the present.

5 I request you therefore to be so good as to ascertain the exact cost of

of extending the scheme to the 3 villages in question from the Sanitary Engineer and obtain the sanction of Government, to the revised estimate (after deducting the cost of extending the scheme to the 3 villages) and also to the resolution of the Municipal Council for the grant-in-aid from Government and the loan applied for by the Municipal Council

6 The plan and the revised estimate with the report of the Sanitary Engineer, received with your letter under reply are enclosed for kind perusal

I have the honor to be,
Sir,
Your most obedient servant,

Deputy Commissioner,
Hassan District

File No of 193

General and Revenue Secretariat

Proceedings of the Special General meeting of the Hassan Town Municipal Council held in the Municipal office on 12th August 1937 at 8-30 a m

Present	15 members
Vacant	One
Absent	5 members

Subject - Read letter No L 1312/11 dated 4th August 1937 from the Secretary to Government, Local Self Government re: the water supply scheme to Hassan town and discussed the question at length

Resolution

It is seen from the communication that the scheme is estimated to cost Rs 1,36,410 and the opinion of the Council is called for to suggest ways and means for financing the scheme and to agree to the revised scheme as well It has also been suggested to confine at present, the supply and distribution of water only to the town and its extension, leaving the question of supplying water to the three villages for consideration in due course when funds permit

It was ascertained by personal talk with the Sanitary Engineer that the probable cost of extending the supply to the three villages will not cost more than Rs 9,000 Dropping the idea of the water supply to the said villages will not materially bring down the cost of the present scheme whereas, it will create discontentment among the rate payers of these villages It was therefore resolved-that the entire scheme be taken up simultaneously without making any reservation

As regards the financing of the scheme, it was resolved that Government be requested to graciously meet half the cost of the scheme, as has been done in other places, as this scheme is an urgent necessity and the resources of the Municipality do not permit to meet the entire cost of the scheme If this prayer is sanctioned, then the Municipal quota of the scheme will be about Rs 68,205/- To meet this sum, it was resolved that the following forecast and proposal be submitted to Government

for their very kind consideration and favourable orders

The anticipated fresh income The normal demand of mohatarfa of the Municipality as it stands now is Rs 8,809/-

Rs 867/- Government have in their order No L 1542-3/11 73-37-8 dated 10th August 1937 sanctioned the revision of vacant site tax from two annas for 80 square yards to 8 annas per 100 square yards as laid in the Regulation The amount now realised under this head is Rs 394/ Taking into consideration, the proportionate increase, it is expected that there will be an enhancement of Rs 867/- under this item

2 Thus the total mohatarfa will be Rs 10,716/-

Rs 2,400/-

3 When the water scheme is taken up, it is inevitable that a water cess of atleast 25% of the mohatarfa or 4 annas in the rupee should be levied This will bring an income of Rs 2400/- in addition

Rs 9,000/-

4 House connection It is expected that atleast 500 house connections will be taken when water is made available It has already been resolved that a tax at Re 1/- per each connection should be levied The prevailing rate [illegible] municipalities is ascertained to be Rs 2/- Following this, if the rate for private connection is raised to Rs 1-8-0, the realisation will be Rs 9,000/-

The total increase under items 1, 2 and 3 will be Rs 12,267/- In addition to this, the question of revision of Municipal tax is impending and it is expected that it will give atleast, an increase by Rs 1,000/-

It will thus be seen that atleast a sum of Rs 13000/- per annum may be expected to be realised by way of normal tax in the coming years in addition to the present demand Against this normal and recurring income, we have to pay

pay off a sum of Rs 68,205/- at 4% interest being municipal quota towards the scheme If it is taken for granted that the Government will be pleased to sanction a loan of Rs 68,205/- to meet the municipal quota of expenditure towards the estimate of the water supply scheme, then the municipality will be liable to pay an annuity of about Rs 4315/- if the loan is made repayable within a period of 25 years at 4% This annuity will be against an anticipated income of Rs 13,000 It was therefore resolved that Government be requested to advance a sum of Rs 68,205/- as a loan at 4% interest in addition to sanctioning an outright grant of a like sum to complete the scheme and that this loan of Rs 68,205/- together with interest be made payable in 25 annual instalments to recoup the full amount of the loan, if the Government for any reason, feel it inexpedient to grant this loan, it was resolved that they may be requested to permit the Municipality to float a debenture loan to raise the sum at 4% interest and guarantee its repayment during a period of 25 years

It was also resolved that the Government be requested to pass final orders early so that the scheme may be completed very early as great difficulty is being experienced by the towns people for adequate water supply

in Mysore, Bangalore

Sir

Adverting to your letter No C 153-2 dated 27th July 19 forwarding a revised scheme for the water supply to the Hassan Town costing Rs 1,36,410 and resulting in an excess of nearly Rs 84,000 over the ..... sanctioned estimate and explaining the reasons for the excess, I am directed to state that Government desire that the cost of t sent scheme should be reduced by providing only for items which are absolutely necessary such as pumping installation, the rising main and the main distributaries and that the distributaries to the three villages which are each about 1½ miles from the town as well as the connections to the distant localities may be omitted for the present

I am to request you to send up a reduced estimate omitting as far as possible the cost on the distributaries which are not immediately necessary

The file of records accompanies for reference and re-transmission

Letter No S E 853 dated the 27th/28th August 1937, from the Sanitary Engineer, Bangalore, to the Deputy Commissioner, Hassan District

---

Annual Maintenance estimate for the new scheme of Hassan Water Supply

With reference to your letter No C 293-37 dated 20th August 1937 on the above subject, I have the honor to state that according to the original scheme, the annual maintenance charges worked out to ₹ 5,000/- on account of the proposed water supply to the old town and ₹ 3,000/- (which is the existing A M charges of the borewell system) for water supply to the extension with the bore ell system Thus the total A M Charges under the original scheme would be ₹8,000/- in all

But according to the revised estimate of ₹ 1,36,410/- there will be only one power station at the head works of the water supply of Hassan town from which the whole town will get its supply Under this scheme, the annual maintenance charges will come to ₹ 6,800/- as per the enclose estimate

The Secretary to Government,
L S G Department, Bangalore

With reference to your letter No L 3133/ Ml 117-37-3 dated 27th September 1937, I have the horour to enclose herewith a revised scheme for the water supply of Hassan Town costing Rs 1,15,935/- Copy of the Letter No 464 dated 19th October 1937 together with report, estimate and plan is enclosed

I have the honour to be,
Sir,
Your most obedient Servant

P Parthasarathy

Director of Health

Report to accompany the revised estimate for s 1,15,935/- for the water supply works of Hassan to n

---

The original estimate for water supply of Hassan to n which was submitted to Government for sanction was received duly sanctioned for Rs 52,625/-, in their order No L8476-8/ME 3136-83 dated 25-27- 37 with the establishment, tools and plant charges at 12½% In this scheme, it was proposed to utilise the existing borewell system for water supply to the extensions and feed the rest of the town by sinking a well near Hunsenkere, providing about 40 public fountains and giving facilities for a few house connections Considering the maintenance charges of both the borewell system and the new scheme, the Municipal Council and the public of Hassan represented before the Dewan during his tour in Hassan District and requested for a more comprehensive scheme of water supply abandoning the borewell system and giving facilities for about 700 house connections and 100 public taps by pumping from a well sunk in the bed of the Halvagal feeder halla

Accordingly, a revised estimate for Rs 1,36,410/- was prepared to meet the demands of the public and submitted for sanction to Government But subsequently, according to letter No L 3132/ 1 117-37-3 dated 27th September 1937 from the Secretary to Government, to the Director of Health, the estimate has been reduced to Rs 1,15,935/- by omitting for the present, the distributaries to the three villages which are each about 1½ miles from the town and by re-arranging the distribution system so as to reduce the length of the distribution mains as desired therein A comprehensive

statement containing the sanctioned and the present reduced ~~rate~~ estimate is appended herewith and the excess or deficit under each item is pointed out The reasons for such excess or deficit are also given

Item No 1 Under this item, a lumpsum provision of Rs 1,000/- was made in the sanctioned estimate for sinking the suction well, for the supply of a portion of the town In the revised scheme, it is found necessary to have the suction well of a fairly large diameter for the supply of the whole town and extensions Hence a provision of Rs 2680/- is made in the estimate for suction well leading to an excess of Rs 1680

Item No 2 PUMP HOUSE Originally a provision of Rs 2,500/- was made in the sanctioned estimate for the construction of a building to accommodate engine and two filters But as the detailed estimate for this item appended herewith shows, the accommodation required for the machinery and the three filters is much more than what can be provided with the original amount of Rs 2,500/-, a provision of Rs 3,000/- as per actual requirements is made in the revised estimate thus leading to an excess of Rs 500/- under this head

Item No 3 Under this item, a provision of Rs 3,000/- was made for one engine and pump to give a discharge of 6,000 gallons per hour against a head of 200 ft The same provision is found to be adequate even now for a pump having a capacity of 11,000 gallons per hour against a head of 200 ft as per actual requirements and as per current market rates

Item No 4 A provision of Rs 7,000/- was made in the original estimate under this item for two pressure filters of each of 3,000 gallons per hour capacity But the capacity of two

two filters are found to be inadequate in the present scheme and hence three pressure filters of each of 3,500 gallons per hour capacity are provided at a cost of Rs 17,000/- as per current market rates thus leading to an excess of Rs 10,000/-

Item No 5 In this item, a provision of Rs 3,000/- was made for a 5" C I rising main 1500 ft long Now a provision of Rs 20,415/- is made in the revised estimate for a 6" C I rising main 5400 ft long, as per actual measurements between the site selected for the pump house and that of the elevated tank Owing to the increase in length and in the capacity of the rising main, and further owing to the rise in prices of materials, there is an excess of Rs 17,415/-

Item Nos 6 and 7 A lump sum provision of Rs 5,000/- and Rs 3,000/- were made for each of the two items tanks and staging respectively in the sanctioned estimate These provisions are found to be inadequate to meet the present actual market prices of the tanks and staging and hence, a provision of Rs 6,000/- and Rs 3,500/- respectively are now made in the present estimate thus leading to an excess of Rs 1,000/- and Rs 500/- under each item

Item No 8 Under this item a provision of Rs 16,000/- was made in the sanctioned estimate for about 40 public fountains and for giving facilities for a few house connections The present revised estimate provides for about 70 public taps and for giving facilities for 500 house connections. The provision of Rs ~~40,250~~ 43661/- made under this item does not include water supply for the three villages viz Rayasatte, Adavalli and Madigarpalya since the distribution main and submain have to be laid in a large area of the town to meet

the demand of the public and since the prices of materials are very high, it has led to an excess of Rs 27661/- under this item It is proposed to utilise 1000 ft of 3" C I pipes available in the Municipal office in working out the distribution

Item No 9 Under this item, there is a savings of Rs 400/- which will cover a portion of the excess in other items as there is no necessity for a centrifugal pump for the borewell system

Item No 10 A sum of Rs 2,500/- is provided for the erection of the tanks

Item No 11 Under this item, a sum of Rs 2,000/- was originally provided in the sanctioned estimate for the erection of two filters and machinery This amount is found to be inadequate for the erection of three filters and machinery as per revised scheme Hence a provision of Rs 2,500/- is made in the revised estimate as per actual requirements thus leading to an excess of Rs 500/- under this item

Item No 12 No provision was made for this item in the sanctioned estimate As it is found necessary to lift the existing elevated tank of 5000 gallons capacity to the same level as that of the proposed elevated tank, on a 25 ft staging a provision of Rs 750/- will be necessary and the same has been made in the revised estimate

Item No 13 Originally no provision was made for treating the water with chlorine etc The present estimate provides for chlorination of water at a cost of Rs 2,000/- which is an extra item not found in the sanctioned estimate

The establishment, tools and plant, charges are calculated at 12½% on the labour portion of the work ich will amount to Rs 30,000/- Under the circumstances, the original sanctioned estimate for Rs 55,000/- is found to be absolutely inadequate to

Meet the comprehensive scheme and hence it is now revised to Rs 115 935 leading to a net excess of Rs 63 310

According to the revised estimate, the Government share of the cost will be one half of Rs 1,15-935- which is Rs 57 967 while the rest of the estimated cost will have to be met by the Municipality

Extract from representations submitted by the Hassan Town Municipal Council to the Dewan on 7th November 1945

WATER SUPPLY The present water supply from Hunasinkere curb well has been found very unsatisfactory A scheme for pumping water from Yagachi River is prepared for Rs 1 41 200/- and the same has been ordered to be taken up after the cessation of the war Now the war has ceased and this scheme may kindly be ordered to be taken up for execution immediately

With regard to the financing of the scheme the Government may be pleased to bear half of the cost from the Town Improvement Grants and Advance the other half as a loan to the Municipality repayable in 20 instalments The Municipal Council has brought into force the levy of ground-rent in the weekly shandies since the beginning of the current year and has hoped to realize not less than Rs 10 000/- on this account Further the Municipal Council has proposed the levy of Octroi duty on fresh articles and they expect to realize not less than Rs 3 000/- more and these two sources of income will be earmarked for repayment of the loan to be granted to the Municipality for water-supply improvement works

x x x

Note on Water Supply to
Hassan Town

At present the water supply to Hassan Town is from curb wells sunk in the Thannirhalla valley below Hunsinkere Tank The water supply in these wells gets reduced during summer seasons when the Thannirhalla valley gets dried up Consequently the water supply to the Town is inadequate - during summer

Two proposals were under consideration to overcome the above difficulty

(a) The first is to reserve the water in Hunsinkere Tank for being let down into Thannirhalla valley whenever necessary

The following aspects have to be considered before the scheme could be taken up

1 Cost of reservation of tank (roughly Rs 1,75,000)

2 The likelihood of the tan failing in the years of deficient and poor rain fall

3 The necessity to institute a very careful watch in the upper tank contours to prevent contamination as the situation of the tank is very near the town

(b) The second proposal is to pump water from the Yagachi River An estimate for Rs 1,52,000/- was prepared and submitted for sanction in the year 1941 The Secretary to Government Law Department in his letter No L 10091/M1 77-41-23 dated 22-4-1942 to the Deputy Commissioner, Hassan has stated that while Government consider that the Yagachi River scheme is no doubt the best possible one, yet it may not be possible for some time to come on account of the war - situation to think of executing the scheme for want of materials The Scheme was therefore kept by

As an emergency measure therefore the Hunsinkere Tank scheme was ordered to be adopted as a purely temporary measure for a period of three years only Accordingly an estimate for Rs 9 340/- for protecting and using the water in Hunsinkere tank by a pipe conduit was prepared and submitted for sanction The estimate was sanctioned in G O No L 147-50/M1 77-41-51 dated 6th July 1943 There was no response to the call for tenders on several occasions Finally the estimate was revised to Rs 23063/- based on the then prevailing market rates and forwarded to the President, Town Municipal Council, Hassan for countersignature The estimate was received countersigned and submitted to Government for sanction The Additional Secretary to Government in his letter No 3642 dated 12-11-1945 to the Deputy Commissioner Hassan has ordered that the scheme may lie over for the present due to heavy cost of cast iron pipes

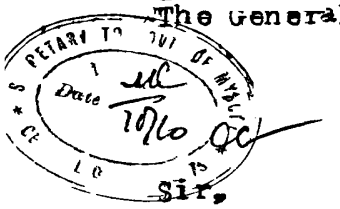
To
The General Secretary to the Government of His Highness
The Maharaja of Mysore, BANGALORE



Sir,

Subject Scheme of Water Supply from Yagachi River to Hassan Town

With reference to your Letter No. 3596 dated 24.9.49 on the above subject I write to state that this subject was brought before the Municipal Council at their ordinary general meeting held on 26th September 1949 when they have unanimously resolved to convey their thanks to the Government for their decision to sanction the Scheme of Water Supply from Yagachi River to this Town. They have further resolved that the Government be requested to take up the work during the current year alone as the scarcity of water supply is increasing day by day

The Municipal Council have resolved to provide a sum of Rs 50,000/- every year and accepted to pay interest @ 5% also. To improve the Financial Position of this Municipality towards heavy expenditure, the Municipal Council have proposed to take action after obtaining the suggestions of the Taxation Committee.

An extract from the resolution of the Municipal Council held on 26th September 1949 is herein enclosed for your ready reference and obtaining sanction of Government to the resolution of the Municipal Council.

Municipalities towards the discharge of the loan charges
But this is a small amount and it would take
a long time for the Rly Bd to repay the entire
amount but consider that the Municipalities ought
not to depend on doles, but should raise
their own funds The Rly Bd would also do
well not to divert their funds from obligatory
duties to optional activities & say that they
have no funds so far as possible no optional
items of expdr should be taken up before
adequate provision is made for discharging the
obligatory duties also transportation facilities
The Rly Bd may very openly state in the
proposed annually about Rs 50,000 towards
the sinking fund & interest on the loan to
be raised further by the Rly by the Govt
I do not propose that the interest with them will be 5% Govt
or the Rly Bd may consider the above 4%
points & furnish their further views
in the matter for the orders of Govt very

Express Immediate

No h 3596 D 24-9-1949

To The President, Hussain Sagar Project

Subj - Water supply to Hussain Sagar Project at an estimated cost of Rs 11,47,500

With reference to the correspondence ending with your letter No [illegible] dated 19-4-49 on the above subject I am directed to state that it is decided to sanction the estimate for Rs 11,47,500 as forwarded by the C E D for the water supply improvements to Hussain Sagar. The cost is proposed to be met by the Govt of the H.E.H. on equal proportions The expenditure will be spread over a period of three or four years

In regard to the meeting of the H.E.H. Share of the cost, the Govt with advances amounting Rs 57,375 to the H.E.H. during the current year the fully observations are communicated to the H.E.H. The H.E.H. have agreed to set apart a sum of Rs 25000 every year, being the [illegible] contribution of the Govt

rate of interest on the loan will be 5 per cent and not 4 percent.

I am to request that the Municipal Council may consider the above points and furnish their further views in the matter for the orders of Government very early.

Yours faithfully,

Sd MIR SAFDAR HUSSAIN

General Secretary to Government

GOVERNMENT OF HIS HIGHNESS THE MAHARAJA OF MYSORE

No L 3596 General and Revenue Secretariat

IMMEDIATE *Dated Bangalore* 24-9-1949

FROM

The Secretary to the Government of
His Highness the Maharaja of Mysore
General Department, Bangalore

To

The President,
Hassan Town Municipal Council

SIR

SUBJECT: Water supply to Hassan Town Municipality at an estimated cost of Rs 11,47,500/-

With reference to the correspondence ending with your letter No. hc 89/48-49 dated 19th April 1949 on the above subject, I am directed to state that it is decided to sanction the estimate for Rs 11,47,500/- as scrutinized by the Chief Engineer for Roads and Buildings for the water supply improvements to Hassan The cost is proposed to be met by the Government and the Municipality in equal proportions The expenditure will be spread over a period of three or four years

In regard to the meeting of the Municipal share of the cost, the Government will advance the sum of Rs 5,73,500/- to the Municipality. In this connection the following observations are communicated to the Municipal Council The Municipal Council have agreed to set apart a sum of Rs 25,000/- every year, being the income from toll gate and shandy fee towards the discharge of the said loan But this is a small amount and it would take a long time for the Municipal Council to repay the entire amount Government consider that the Town Municipal Council ought not to depend on doles, but should raise their own funds The Municipal Council would also do well not to divert their funds from obligatory duties to optional activities and say that they have no funds. As far as possible no optional items of expenditure should be taken up before adequate provision is made for performing the obligatory duties also. The Municipal Council may levy special water rate and provide annually about Rs.50,000/- towards the sinking fund and interest on the loan to be granted to the Municipality by the Government The rate of

Reference No L.11341 dated 5 4 1949 G R S

Sir,

Gen Secy

The Municipal Council held a Special General Meeting this morning, and considered the question of cost and the payment in proportion as suggested in the abovesaid letter

9/4/49

The Town has grown enormously big and we hope the population will double itself in the course of two decades As such the Council, after deep deliberation, has agreed to meet half the cost of expenditure which amounts to nearly Five Lakhs and Seventyfour Thousands Rupees

STATE TO GOVT OF MYSORE 11/4 PUBLIC WORKS

The Council requests the Government to grant the sum by way of loan at 4% interest as suggested

We are agreeable to repay this loan in annual instalments at Rs.25 000/- per year which will be set apart out of the income from Tollgate and Shandy Fees

A copy of the specific resolution of the Council to that effect has been enclosed for kind reference

Yagpa H11341/5/4

Sir Estimate for the Supply of water from the Yagachi river to Hassan Town

With reference to the Correspondence ending with your letter no H C89/48 dy 30-11-48 forwarding an estimate for Rs 11,68,900 for the water supply scheme of the Hassan Town from the Yagachi river, I am directed to state that the above work Cost of the work will have to be borne by the Govt and the Govt are not prepared to bear 3/4 of the Municipality in equal proportions as is generally the case in Estimated Cost of the above scheme & that such Schemes and Govt will have they will have no objection to bear assist the Municipality to half the Cost, the only to meeting the other half the expenditure by floating a by taking a loan at 4½ interest and repayable in convenient instalments I am to enquire whether the arrangement is acceptable to the Municipality and what sources of revenue they would earmark towards the repayment of the loan instalments and in how many instalments it would be repaid. I am therefore to request you to obtain and forward the foregoing the information in the matter. The estimate has been returned by the Chief Engineer was corrected to Rs 11,47,500

This Council convened a Special General Meeting and gratefully expressed their deep sense of gratitude and I heartily request you to kindly accept the same

The Council has resolved that this comprehensive Scheme for the supply of potable water from Yagachi River prepared by the Sanitary Engineer, costing about Twelve Lakhs of rupees may kindly be sanctioned and put into execution immediately in the interest of this Town which is growing rapidly But, as the finances of this Municipa are not capable of bearing this huge expenditure out of funds all at once, it was resolved to request the Goverr to meet three fourths or seventy five per cent of the estimated amount by way of grants and the balance namely one fourth or twenty five percent of the cost as a loan to the Municipality enabling them to meet their share of the cost This loan proposed to be repaid by annual payment of twenty five thousand rupees out of the normal income For this purpose the income derived by the collection of Ground Rents in the

OFFICE OF THE PRESIDENT
TOWN MUNICIPAL COUNCIL

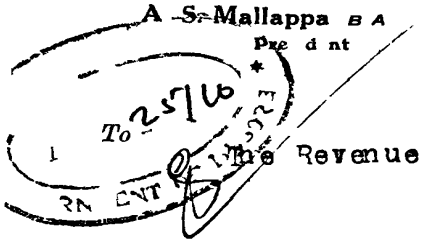
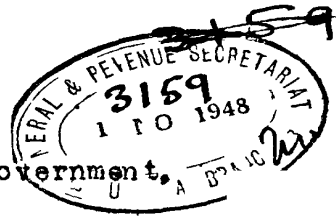
Hassan Dated 22-10- 1948

From

A S Mallappa B A
Pre d nt





To The Revenue Secretary to Government,
Bangalore

Sir

In continuation of this office letter No HC89/48 dated 28-9-48 regarding the Scheme of Water Supply to Hassan Town from Yagachi River, I write to state that some members of th council waited in deputation on the Minister for Local Self Government at Mysore who was pleased to give a patient hearn and to assure us of his sympathies for the improvement of Hassan Town The Municipal council in their Special meetir convened on 15th October 1948 expressed their deep sense of gratitude and to request you to kindly convey the same for acceptance

The council have further resolved that the estimate pr -pared by the Sanitary Engineer at a cost of about 12 lakhs rupees may kindly be sanctioned and put up into execution immediately in view of the ever increasing population of th growing town which requires at least one lakh gallons of potable water daily for their consumption The present sup from the wells is quite inadequate and the water pumped is r wholesome also

As the finances of this municipality do not permit to bear the entire cost of the estimate, the council unanimousl resolved to request the Government to extend their benevelance as has been shown to other sister municipalities in the State to bear the entire cost of estimate and execute the work immediately by charging one fourth of the estimated amount as a loan to th Municipality to be repaid by annual payment of Rs25,000/- out of the normal income of the municipality and that for this

proportion and roofed [illegible] R.C.C [illegible] ab.
is provided for this [illegible].

6. Alum House: [illegible] to construct
[illegible]lum house and stores [illegible] provided
purchasing and installation [illegible] regulati[illegible] anti

5 Pumping Machinery: Two sets [illegible] Low-lift pumping [illegible] and two sets of High-lift pumping sets are provided, some units serve as standbye The low-lift pumping sets are of 5 H.P and the High-lift pumping units are of 200 H.P. res
A sum of Rs 1,5 lakhs is provided for pur and [illegible] the machinery

5 Telephone lines: It is necessary to have telephone connections between the Head works and the elevated reservirs to give the operators timely intimation to start and stop the pumps The total length of the Telephone line from the head-works will be about 6 miles A provision of Rs 2100/- is made for this item.

7 Service Road along the rising main: The country is water-logged and marshy between the head works and the town proper a service road is necessary along the Rising Main especially as there is no other approach road to the water works. A sum of Rs. 56,000/- is provided for forming the road with proper drainage arrangement on either side.

8. Temporary Establishment: Provision is made for two surveyors and one sub-overseer for supervising the work during execution Three temporary maistries and 2 watchmen are also included. A sum of Rs 32,000/- is provided for employing the above staff for a period of 3 years.

9 Rising Main: The total length of the Rising main is 2600 rft. 10" cast iron pipes of 'C' class are proposed --

Contd.

the site at the Tannimala is not favourable for the location of service tanks and gravity filters as the level do not permit. On the other hand the site at Holvagal anicut is

It is now proposed to supply water to Hassan Town from the Yagachi river. The river is flowing at a distance of about four miles from the Town. The Head Works are located near the Holvagal anicut. The scheme contemplates the construction of a suction well and pump house near the Holvagal anicut and pump raw water to an alum mixing chamber. The water is further treated in the Flocculator, settling tanks and hand worked gravity filters and finally enters the pure water tank. The pure water is pumped through a 10" C.I. Rising main into an elevated R C C reservoir of 2 lakhs gallons capacity located at the highest point the town and distributed to the various parts of the Town by a net works of different sections of distribution mains and sub-mains

The following are the details of the provisions made in the estimate:-

1. Suction well: An R C C. curb well 10 feet in diameter and 15' deep with suitable intake pipes, control valves etc, is proposed to be constructed at a cost of Rs 5,150/- only.

2. Pump House: Both the low-lift and High-lift pumping units proposed to be installed in the same building. The building proposed to be constructed with size stone masonry in lime mortar for foundation and basement and burnt brick in lime-mortar for the super-structure. The roofing will be of R C C. A provision of Rs 18,000/- is made for the purpose

3. Pure Water Tank: The pure water tank is designed for a capacity of 50,000 gallons. The tank is constructed under-ground walls of burnt brick in cement mortar 1:4 prop/

CALCULATION SHEET FOR THE DESIGN OF THE RISING MAIN, PUMPING MACHINERY, FLOCCULATER, SETTLING TANKS, FILTERS, DISTRIBUTION MAINS ETC., FOR WATER SUPPLY TO HASSAN TOWN FROM THE YAGACHI RIVER

Rising Main:

Present population of Hassan Town 22,000.
Prospective population 30,000

Assuming a rate of supply of 20 gallons of water per head per day as the Town is likely to have an underground drainag system. the total quantity of water

for the present population 4 4 lakhs gallons
for the prospective population 6 lakhs gallons

The future requirements of 6 lakhs of gallons may be assumed to be pumped in 16 hours or two shifts of 8 hours each

Discharge per minute $\frac{6,00,000}{16 \times 60}$ or 625 gallons

The static difference in head between the pumping station the Yagachi river and the highest point in the Town where elevated reservoir is proposed to be located:- 300 f
Elevated tank stating 50 feet
Height of tank 20 feet
Total static head 370 feet

Friction loss in a 9" pipe line for a distance of 25000 fe = 175
-do- 10" -do- = 100
-do- 11" -do- 65

To determine the most economical section of the above 3 sec f pipes, the initial cost and the recurring expenditure by way ne power charges have to be considered The initial exp. ut or laying the pipes and the H.P of the motor required in ea h ase and the corresponding power changes are tabulated below

of pipe ne	Length	Cost of laying the pipes	Total head St+Frict	H P of motor required in each case	Power nges annum
I pipe line	25000'	Rs 2,27,500	370+175= 545	250 H P.	40,500
I pipe line	25,000'	Rs 245,000	375+100= 470	200 H.P	Rs. 32,4
I pipe line	25000'-	Rs.282000/-	370+65= 435	190 H.P.	Rs 32,40

From the above it can be seen that the most economical sec is of 10" diameter cast iron pipes

this section is found to be most economical and would emerge the entire requirement of water of Hassan Town a number of years. The total cost of this item is estimat ₹ 2,45,000/-

10 Quarters to staff: The Head Works are located at a tance of 4 miles from the outskirts of H assan Town and attached to the water works will have to be provided with quarters at the water works The total number of people quired at the Head works as:-

Two operators, Two assistant Operators, Two helpers two fitters and one scavenger -

Provision is made for two blocks of Operator's quar each block consisting of 2 units Two more blocks of He Quarters, each with two units are also proposed A sing is proposed for the Scavanger The total cost of const quarters amounts to ₹ 52,500/- No provision is made Quarters to the staff employed on the distribution syste work would be in the Town limits

11. Filter House and Hard Wash Gravity Filters: The fil use is proposed to be 40' x 30' to accommodate 2 filter measuring(25' x 17') of hard wash gravity type ne bui is proposed to built of size stone in lime mortar for fo and basement and burnt brick in lime mortar for he supe ture The roofing willbe of abbestos she cn st trusses. The total cost of constructing the filter H/ installing Hand Wash gravity filters comes ₹ 64.5

Chlorinate Plant: Provision is also ma purche installing a suitable capacity chlorinat n plant to the filtered water

12 Baffle duct, Flocculater and Se Tanks: e from the river is pumped by the Low ft pumps in

to replace all the G I. pipes by cast iron pipes, the minimum section adopted being 3". Additional lines are also proposed to be laid so that the entire town, including the Extension may have an adequate supply of water Two pipe lines one of 8" C I and the other of 6" C I are proposed to be laid from the 2 lakh gallons capacity tank, the 8" pipe line to feed the Old Town proper and the 6" C I to take one of the Extensions All the pipe lines are inter-connected with necessary control valves so that the entire system forms a grid. This has a double advantage, as the main may be made use of when the other has accidentally burst or is under repair and secondly, a uniform supply is maintained at all points In designing the sections of distribution mains and sub-mains and branch lines, a minimum residual head of 20 feet is allowed at any point, in order to assure of equitable distribution The useful lengths of the released G I pipes of different sections are proposed to be made use of for public fountain connections and small lengths of branch lines that will be required for giving house connections The existing 6" C I rising main is proposed to be released and made use of as a distribution main. The total cost of the distribution system including removing the G I pip and relaying the useful ones, is estimated at Rs 2,08,000/-.

Wash Water Tank: The hand wash filters have to be washed each day with filtered water For a single wash about 16,000 gallons of water are required In addition, the staff attached to water works who will reside there, will have to be supplied with filtered water For this purpose, an R C C tank of 20,000 gallons capacity on 25 feet staging is proposed to be constructed near the filter house, at a cost of Rs 19,000/- only

Miscellaneous and unforeseen works: A sum of Rs 5 provided under this item

The rates provided in the estimate at rates. The total cost

including Establishment, and Tools & Plant charges at 12½ to Rs 11,68,900/- on

A M. Estimate for running the installation:

An estimate for running the installations for a period one year is also enclosed It provides for the necessary staff to work the pumps and to look after the distribution Provision is also made for the power charges and the cost alum, bleaching powder, etc The total cost of the staff is Rs 55,700/- which works out to a rate of Rs [illegible] per 1,000 gallons of water supplied

SANITARY ENGINEER,
BUREAU OF SANITARY ENGINEERING
BANGALORE.

supply, viz , Hunsinkere tank cannot be depended upon during draught years even for the small quantity of water consumed at present The tank practically ran dry during the years 1941 1945 The tank could, however, be used as a source of supply if it is entirely reserved for water supply In such an event, the following aspects will have to be considered

1) Cost of reservation of the tank:

This is likely to be very heavy, as a large amount will have to be paid as compensation to the ryots who are holding a large area of wet land under this tank

2) The likelihood of the tank completely failing in the years of poor rain-fall

3) The necessity to institute a very careful watch in the upper tank contours to prevent contamination, as the tank is situated very near the town

The other alternative is to adopt the Yegachi river as the source of supply This question was investigated in the year 1940 and after conducting detailed surveys, a scheme of water supply to Hassan amounting to 1,62,000/- was prepared But, the incidence of war prevented the scheme from materialising and the scheme was ordered to be deferred mainly due to non-availability of materials, in Law Secretary's letter No L-10091/ML 77-41-23 dated 22-4-1942 addressed to the Deputy Commissioner, Hassan District This scheme contemplated to pump water from the river into the settling tanks to be located at Tannirhalla at a distance of about 5000 feet. This necessitates the laying of two high pressure rising mains, one from Holvagal Anicut to Tannirhalla and the other two from Tannirhalla to the elevated reservoir. In addition, it will not be possible for operating staff at head works to reside there, as they will be very few 2 or 3 people in number Moreover, the site at

Mysore Public Works Dept Bureau of Sanitary Engineering

REPORT TO ACCOMPANY THE ESTIMATE FOR WATER SUPPLY TO HASSAN TOWN

Hassan Town is the District Head Quarters of Hassan District and has a population of about 22,000 at present The Town had no protected water supply prior to 1930 The water of Devigere tank near the Market and of the well on the Kaharaja Park was widely used by the public During the year 1929-30, four bore-wells were sunk in the bed of the tank in the heart of the Town One of these bore wells failed and the total yield from the other three bore-wells was about 2500 gallons per hour These bore-wells were harnessed with electric motor driven deep-well pumps and water supplied to a portion of Hassan Old Town through G distribution pipes. With the growth of the Town and formation of New Extensions, the supply from the bore wells was found inadequate and the idea of supplying water from other sources came up for consideration

Hunsinkere tank situated at the outskirts of the Town was selected as the source of supply This tank is primarily irrigation tank and a small quantity was proposed to be drawn for water supply Three wells were sunk in the waste-weir valley of the tank and the water was pumped through a set of pressure filters, into two service reservoirs of 25,000 gallons and 10,000 gallons capacity respectively and distributed to different parts of the town. The pumping set is capable of pumping 10,000 gallons per hour against a head of 200' and is being worked for 12 hours a day, thus supplying 1,20,000 gallons of water per day This works out to a rate of about 5 gallons per head per day and is very inadequate. Even this small quantity is not equitably distributed, giving owing to the defective distribution system.

Experience has shown that the present source

Sir

I write to state that the present water supply to the Town is far from being satisfactory and we are not getting copious supply of Drinking water For the past several years we have been requesting Government to take up the scheme of water supply from Yagachi River and Sanitary Engineer has been pleased to prepare a comprehensive scheme at a cost of about 12 Lakhs of rupees The town is growing and the population is also on the increase So the council in their meeting held on 30-4-48 and also on 20th September 1948 have considered the subject and have resolved that Government be requested to extend the similar concession to this municipality also I herein enclose a copy of the resolution for favour of kind information

I request you kirdly to obtain permission for an Interview with the Local Self GOvernment and Finance Ministers and to fix up a convinient date for the same early

The finances of the municipality ~~dont~~ do not admit of this heavy item of expenditure and as such it is not possible to meet the entire cost of the Scheme without Government help and assistance

An early reply is requested

Yours faithfully,

A S Mallappa

GOVERNMENT OF HIS HIGHNESS THE MAHARAJA OF MYSORE

General and Revenue Secretariat

No L 11 306 *Dated Bangalore* 17-4-46

FROM

The Secretary to the Government of His Highness the Maharaja of Mysore
Revenue Department

To

The Deputy Commissioner,
Hassan District

Sir,

In inviting reference to this office letter No L 3642 dated 12th November 1945 ordering the postponement of the execution of the water supply improvement scheme in the Hassan Town municipality from the Hunsinakere tank, I am directed to forward herewith a copy of letter No 2062/3 dated 1st April 1946 received from the Chief Engineer of Irrigation stating that it is not possible to execute at present either the main scheme namely the "Yagachi river scheme" or the temporary "Hunsinakere" scheme, for reasons stated therein and adding that, as the inadequacy of supply of water in Hassan is being felt frequently, the temporary scheme would be taken up and executed, if approved I am therefore to request you to intimate <u>immediately</u>, if this temporary scheme may not be taken up and executed inorder to tide over the water difficulty at the place, even though the cost of the revised estimate of the scheme is prohibitive as compared with that of the original estimate sanctioned in Government Order dated 6th July 1943

I am also to state that it is the obligatory duty of the local municipal council to provide the urgent civic amenities such as proper water supply to the residents of the place at its own cost and to enquire why the municipal council should not be asked to meet the cost of this temporary scheme from out of the funds of the municipality this may kindly be treated as immediate and a reply sent <u>within a week</u>

The estimates

stating that it is not possible
to execute at present either of the main
schemes namely the "Yagachi river
scheme" or the temporary
"Humanahan scheme, for reasons
stated therein and adding that,
to meet the demand for the supply of water
as the inadequacy of supply of water in
Hassan was being felt frequently, the
temporary scheme would be taken up &
executed, if approved by Govt
I am therefore
requested to intimate immediately if
this temporary scheme may not be
taken up and executed in order to tide
over the water difficulty at the place, even
though the cost of the scheme is prohibitive
as compared with that of the original estimate
sanctioned vide G.O. dt 6-7-43

I am also to state that it is the obligatory
duty of the local body to provide the urgent amenities
such as proper water supply to the residents
of the place at its own cost and
in case the local body should not be asked
to meet the cost of this temporary scheme from out
of State funds as the help may not be forthcoming
estimates & other records of the scheme
may also be immediately sent

A reply sent on Thursday
Dr Rowson

Note on water supply to Hassan Town

At present the water supply to Hassan Town is from curb wells sunk in the Thannirhalla valley below Hunsinkere tank. The water supply in these wells gets reduced during summer - seasons when the Thannirhalla valley gets dried up Consequentl the water supply to the Town is inadequate during summer

Two proposals were under consideration to overcome the above difficulty

(a) The first is to reserve the water in Hunsinkere tank for being let down into Thannirhalla valley whenever necessary

The following aspects have to be considered before the scheme could be taken up

1 Cost of reservation of tank - (Roughly s 1,75,000/-)

2 The likelihood of he tank failing in the years of deficient and poor rainfall

3 The necessity to institute a very careful watch in the upper tank contours to prevent contamination as the situation of the tank is very near the town

(b) The second proposal is to pump water from the Yagachi River An estimate for s 1 52,000 was prepared and submitted for sanction in the year 1941 The Secretary to Government Law Department, in his letter No L 10091/M1 77-41-23 dated 22-4-42 to the Deputy Commissioner, Hassan has stated that while Government consider that the Yagachi river scheme is no doubt the best possible one yet it may not be possible for some time to come on account of the war situation to think of executing the scheme for want of materials The scheme was therefore kept by

As an energency measure therefore, the Hunsinkere tank scheme was ordered to be adopted as a purely temporary measure for a period of three years only Accordingly an estimat Rs 9 340/- for protecting and rising the water in Hunsinkere

Sir

Water Supply - Hassan Town - Improvements

With reference to your letter No L 8360 dated the 18th February 1946 regarding the above, I have the honour to state that the Sanitary Engineer, Bureau of Sanitary Engineering, to whom the question was referred to for report, has reported that it is not possible for the execution now of either the main scheme or the temporary scheme from the Hunesinakere Tank scheme as the cost of the cast iron pipes have risen from Rs 8/- to Rs 12/- per cwt and the labour charged too has not gone down

A copy of the detailed note received from the Sanitary Engineer is forwarded for information of Government

As the inadequacy of supply of water in Hassan Town is being felt frequently the Sanitary Engineer, if approved, will be directed to take up the temporary scheme pending submission of the revised estimate and sanction thereto

I have the honour to be
Sir
Your most obedient servant,
